OPERATION

MOTORIZED

IN CONTEXT

SPECIFICATION · PROPOSED

Type	Exterior vertical screen, side-guided
Function	Solar gain blocked outside the glass
Performance fabric	Technical exterior solar-control fabric — On request
Max width / drop	On request
Wind resistance	Yes — km/h on request
Control	Motorized · Sync open compatibility
Mounting	Over the opening · façade or curtain wall
Fire reaction	On request (per selected fabric)

WHERE IT FITS

Curtain-wall and façade glazing on corporate, institutional and large-format hospitality projects. Intercepting radiation outside the glass is more efficient than interior shading because the heat never enters.

AUTOMATION

Motorized SUNX shades integrate with standard building-automation and control systems through open compatibility (Sync) — no motor or control brand required.

CERTIFICATIONS

Per selected fabric — on request

Heat-block performance belongs to the selected exterior fabric with its own source — it is not transferable to other lines and is confirmed with SUNX per project. Section detail on request. Specified to the opening.
